

Industry: Fire Protection

Application: Fire Hydrant Wash Station

Product Descriptions: ¾" NCK (NCM0706K-30)

Situation: A BETE customer was designing an emergency wash down station that could be attached to a fire hydrant and they were looking for nozzles to distribute the water spray. The station would be easily transported and connected to the fire hydrant to provide a place where an emergency wash down can take place in situations such as fire, chemical, and other hazardous material situations.

BETE's solution: BETE Application Engineers recommended mounting four ¾" NCM0706K-30 nozzles on a manifold that was designed to easily attach to the fire hydrant. The small angle, full cone NCK nozzles provided good coverage, water projection, and scrubbing effect.
